DETAILED ACTION

Applicant's cancellation of claims 39-55, the amendment of claim 56 and the addition of new claims 59-65, in the paper of 1/11/2006, is acknowledged. Claims 56-65 are present and at issue for examination.

Upon further and closer consideration, it appears that claims 56-58 were not previously examined. This conclusion is reached on the basis that only claims 39-55 were listed on the Office Action Summary Sheet as pending and only claims 39-55 were all listed as being rejected. Clearly claims 56-58 should have been included in the previous rejections made. Thus, upon further and closer consideration the currently pending claims are subject to the following lack of unity. Any inconvenience to applicant caused by this inadvertent mistake is apologized for. The arguments presented in the previous response will be dealt with upon applicants election of a group for examination.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 56, and 59-65, drawn to a method for amplifying a nucleic acid molecule.

Group II, claim(s) 57 and 58, drawn to a kit comprising a thermostable template-dependent DNA polymerase related to *Bacillus stearothermophilus*.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Where a group of inventions is claimed in an application, the requirement of unity of invention shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features. The expression "special technical features" shall mean those technical features that define a contribution which each of the claimed inventions, considered as a whole, makes over the prior art. Swaminathan et al. (U.S. Patent No. 5,830,714, See IDS) teach reverse transcriptase products (kits) from *B. stearothermophilus* and methods of preparing a cDNA molecule from a RNA template and amplifying a nucleic acid comprising mixing a RNA template with *B. stearothermophilus* DNA polymerase comprising reverse transcriptase activity in the presence of various concentrations of magnesium and incubating under conditions sufficient to amplify/synthesize a DNA molecule. Thus, the shared technical feature of the groups is not a "special technical feature", unity of invention between the groups does not exist.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1652

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
